

# Airlines On-Time Performance, Delays, Cancellations and Diversions

## Milestone 1 -

### Introduction:

Airline cancellations or delays are one of the major causes of passenger inconvenience. With the publicly available dataset, using data science, I am hoping to gain meaningful insights into the best-performing airlines and understand the causes of delays, diversions and cancellations across different airline carriers. For the final project, I would like to analyze airline data to identify different factors and their effects on a carrier's performance. As a performance measure, I would like to explore on-time arrivals, and the number of cancellations by the carrier and explore different reasons for delays and diversions. Based on the outcome, carriers can take necessary actions to focus on the problem areas.

### Data Source:

- Flat File: Excel files from BTS. The Excel data has airline performance factors such as cancelled, diverted, delayed and on-time data. The downloaded raw data has up to 34 columns.  
[https://www.transtats.bts.gov/OT\\_Delay/OT\\_DelayCause1.asp?20=E](https://www.transtats.bts.gov/OT_Delay/OT_DelayCause1.asp?20=E) (Download Raw Data link for data).
- API: API provides historical weather information. <https://visual-crossing-weather.p.rapidapi.com/history?startDateTime={}&aggregateHours=24&location={}&endDateTime={}&unitGroup=us>
- Website: The website consists of a list of diverted flights. <https://www.diverted.eu/>

### Relationships:

The Flat file is the main data source with scheduled flight information.

Flat File - API:

Data from the flat file has cancellations and delays due to weather. I would like to look up the weather information for the flight date at the origin/destination of flights cancelled or delayed due to bad weather. The Bureau data has up to January 2023 data. To look up the weather for a past date, I would need historic weather data. The API gets the historic weather data for a location (origin or destination city name). This will enable us to validate if there truly was a bad weather situation for a flight to be delayed or cancelled. With this, we can also identify the cause of bad weather like storms, snow, wind, etc.

- Flat file has many to many relation with the API. We will need to pass the flight date and the origin or destination city to the API to get weather information for a particular date and place.

Flat File - Website:

The flat file has a column for diverted flights but does not have any information on the cause for diversion. I would like to look up the reason for a flight being diverted. The

website and flat file can be matched on flight date, origin and destination to lookup diverted flight information.

- Flat file has many to many relation with the Website. We will need to pass the flight date and the origin and destination city to the website to get flight diversion details for a particular date and route.

## Project Subject Area:

The project aims on identifying various performance measures in airline operations. Using the statistical analysis we can gain insights into the best and least performing airline carriers and the most common reasons for delays and cancellations.

## Challenges:

The flight performance data size is huge (flat file). I would have to find ways to reduce data to a reasonable size without losing meaningful information.

## Conclusion:

For the first project milestone, I have identified data from different sources in different formats. I will be applying various data cleansing and visualization techniques on this dataset to gain meaningful insights in the upcoming project milestones.

## Milestone 2 - Cleaning/Formatting Flat File Source

Flat File: Excel files from BTS. The Excel data has airline performance factors such as cancelled, diverted, delayed and on-time data. The downloaded raw data has up to 34 columns.  
[https://www.transtats.bts.gov/OT\\_Delay/OT\\_DelayCause1.asp?20=E](https://www.transtats.bts.gov/OT_Delay/OT_DelayCause1.asp?20=E) (Download Raw Data link for data). The Flat file is the main data source with scheduled flight information.

```
In [1]: # Import necessary libraries

import pandas as pd
from datetime import datetime
import numpy as np

#Milestone 3 libraries
from urllib.request import Request, urlopen
from bs4 import BeautifulSoup
```

```
In [2]: #Read flight data from "https://www.transtats.bts.gov/OT_Delay/OT_DelayCause1.asp?20=E"

flight_data_df = pd.read_csv('T_ONTIME_MARKETING_May.csv')
flight_data_df.head(5)
```

```
Out[2]:
```

	YEAR	QUARTER	MONTH	DAY_OF_MONTH	DAY_OF_WEEK	FL_DATE	MKT_UNIQUE_CARRIER	OP_UNIQUE_CAI

1	2022	2	5	1	7	5/1/2022	AA	

						12:00:00 AM	
2	2022	2	5	1	7	5/1/2022 12:00:00 AM	AA
3	2022	2	5	1	7	5/1/2022 12:00:00 AM	AA
4	2022	2	5	1	7	5/1/2022 12:00:00 AM	AA

5 rows × 39 columns

## Data Transformation

### i. Drop Columns

Drop unwanted columns to reduce the data size and improve data readability. Columns that I will not be using for this project are as follows:

- ORIGIN\_AIRPORT\_ID
- ACTUAL\_ELAPSED\_TIME
- AIR\_TIME
- FLIGHTS
- ORIGIN\_WAC
- DEST\_AIRPORT\_ID
- DEST\_WAC
- AIR\_TIME

```
In [3]: flight_data_df = flight_data_df.drop(columns=['ORIGIN_AIRPORT_ID', 'ACTUAL_ELAPSED_TIME',
                                                    'ORIGIN_WAC', 'DEST_AIRPORT_ID', 'DEST_WAC', 'AIR_TIME'])
flight_data_df.head(5)
```

```
Out[3]:
```

	YEAR	QUARTER	MONTH	DAY_OF_MONTH	DAY_OF_WEEK	FL_DATE	MKT_UNIQUE_CARRIER	OP_UNIQUE_CAI
0	2022	2	5	1	7	5/1/2022 12:00:00 AM	AA	
1	2022	2	5	1	7	5/1/2022 12:00:00 AM	AA	
2	2022	2	5	1	7	5/1/2022 12:00:00 AM	AA	
3	2022	2	5	1	7	5/1/2022 12:00:00 AM	AA	
4	2022	2	5	1	7	5/1/2022 12:00:00 AM	AA	

## ii. Look for Duplicates

Duplicates cause inconsistent results when dealing with statistics. Hence dropping duplicate rows.

```
In [4]: print('Dataframe before dropping duplicates :', flight_data_df.shape)
flight_data_df = flight_data_df.drop_duplicates() # 1,389 rows dropped
print('Dataframe after dropping duplicates :', flight_data_df.shape)
```

Dataframe before dropping duplicates : (602950, 32)

Dataframe after dropping duplicates : (601561, 32)

## iii. Replace values in a column

Cancellation code is represented as A, B, C and D, which is not very informative. The BTS website provided details on this code as follows:

- A Carrier
- B Weather
- C National Air System
- D Security

```
In [5]: flight_data_df.CANCELLATION_CODE = np.where(flight_data_df.CANCELLATION_CODE=='A', 'Carrier',
                                                    np.where(flight_data_df.CANCELLATION_CODE=='B', 'Weather',
                                                            np.where(flight_data_df.CANCELLATION_CODE=='C', 'National Air System',
                                                                    np.where(flight_data_df.CANCELLATION_CODE=='D', 'Security',
                                                                            flight_data_df.CANCELLATION_CODE)))
flight_data_df.groupby(['CANCELLATION_CODE'])['CANCELLATION_CODE'].count().sort_index()
```

```
Out[5]: CANCELLATION_CODE
Carrier          590957
National Air System  4902
Security           1394
Weather          4307
Name: CANCELLATION_CODE, dtype: int64
```

## iv. Rename Column

To make more sense of the information in cancellation\_code, replacing the column to cancellation reason.

```
In [6]: flight_data_df = flight_data_df.rename(columns={"CANCELLATION_CODE": "CANCELLATION_REASON"})
flight_data_df.columns
```

```
Out[6]: Index(['YEAR', 'QUARTER', 'MONTH', 'DAY_OF_MONTH', 'DAY_OF_WEEK', 'FL_DATE',
              'MKT_UNIQUE_CARRIER', 'OP_UNIQUE_CARRIER', 'ORIGIN', 'ORIGIN_CITY_NAME',
              'ORIGIN_STATE_ABR', 'ORIGIN_STATE_NM', 'DEST', 'DEST_CITY_NAME',
              'DEST_STATE_ABR', 'DEST_STATE_NM', 'DEP_DELAY', 'DEP_DELAY_NEW',
              'TAXI_OUT', 'TAXI_IN', 'ARR_TIME', 'ARR_DELAY', 'ARR_DELAY_NEW',
              'CANCELLED', 'CANCELLATION_REASON', 'DIVERTED', 'DISTANCE',
```

```
'CARRIER_DELAY', 'WEATHER_DELAY', 'NAS_DELAY', 'SECURITY_DELAY',
'LATE_AIRCRAFT_DELAY'],
dtype='object')
```

## v. Add new columns

### STATUS

```
In [7]: #Adding a new column 'STATUS' that tells the status of a flight
flight_data_df['STATUS'] = ''

flight_data_df.STATUS = np.where(flight_data_df.CANCELLED==1, 'Cancelled',
                                np.where(flight_data_df.DIVERTED==1, 'Diverted',
                                           np.where(flight_data_df.ARR_DELAY<=15, 'On-Time',
                                                    np.where(flight_data_df.ARR_DELAY>15,
flight_data_df.groupby(['STATUS'])['STATUS'].count().sort_index()
```

```
Out[7]: STATUS
Cancelled      10604
Delayed        119624
Diverted         1581
On-Time        469752
Name: STATUS, dtype: int64
```

### DELAYED

As a step to data reduction, I will be considering flights arriving 15 minutes or later as delayed

```
In [8]: #Creating a new column 'DELAYED'. A flag that represents if a flight was delayed. Similar
flight_data_df.loc[(flight_data_df['ARR_DELAY']>15), 'DELAYED'] = True
flight_data_df.loc[(flight_data_df['ARR_DELAY']<=15), 'DELAYED'] = False

flight_data_df.groupby(['DELAYED'])['DELAYED'].count().sort_index()
```

```
Out[8]: DELAYED
False      469752
True       119624
Name: DELAYED, dtype: int64
```

### DELAY REASON

```
In [9]: #Adding a new column 'DELAY_REASON' that tells the reason for a flight getting delayed
#Using the newly created DELAYED flag and the available columns for each type of delay t
flight_data_df['DELAY_REASON'] = np.where(((flight_data_df.DELAYED==True) & (flight_data
np.where(((flight_data_df.DELAYED==True) & (fl
np.where(((flight_data_df.DELAYED==Tr
np.where(((flight_data_df.DE
np.where(((flight_d

flight_data_df.groupby(['DELAY_REASON'])['DELAY_REASON'].count().sort_index()
```

```
Out[9]: DELAY_REASON
481937
Carrier      72453
LateAircraft  25504
NAS          17384
Security      131
Weather      4152
Name: DELAY_REASON, dtype: int64
```

## vi. Implementing arithmetic functions for statistical analysis

```
In [10]: # Create a new dataframe with total number of flights per operating carrier to calculate
flight_totals = flight_data_df.value_counts(subset=['OP_UNIQUE_CARRIER']).reset_index()
flight_totals_df = pd.DataFrame(flight_totals) # Convert to dataframe
flight_totals_df.columns = ['OP_UNIQUE_CARRIER', 'TOTAL'] # Assign Column names
flight_totals_df['PERCENTAGE'] = round(flight_totals_df.TOTAL/flight_totals_df.TOTAL.sum

flight_totals_df = flight_totals_df.sort_values('PERCENTAGE',ascending=False) #Sort by p
flight_totals_df.head(5)
```

```
Out[10]:
```

	OP_UNIQUE_CARRIER	TOTAL	PERCENTAGE
0	WN	107950	17.94
1	DL	76021	12.64
2	AA	71471	11.88
3	OO	66615	11.07
4	UA	53535	8.90

```
In [11]: # Calculate percentage by carrier and flight status
flight_status = flight_data_df.value_counts(subset=['OP_UNIQUE_CARRIER', 'STATUS']).reset_
flight_status_df = pd.DataFrame(flight_status) #create a dataframe
flight_status_df.columns = ['OP_UNIQUE_CARRIER', 'STATUS', 'COUNT'] #Add column names
flight_status_df = flight_status_df.sort_values('OP_UNIQUE_CARRIER') #Sort by operating

flight_status_df['PERCENTAGE'] = ''

for index, row in flight_status_df.iterrows():
    tot = flight_totals.loc[flight_totals.OP_UNIQUE_CARRIER==row.OP_UNIQUE_CARRIER].TOTA
    val = (row.COUNT/tot * 100)
    flight_status_df.at[index, 'PERCENTAGE'] = round(val[0].astype(float),2) #Calculate t

flight_status_df.head(10)
```

```
Out[11]:
```

	OP_UNIQUE_CARRIER	STATUS	COUNT	PERCENTAGE
33	9E	Delayed	3113	15.33
48	9E	Cancelled	542	2.67
74	9E	Diverted	35	0.17
8	9E	On-Time	16613	81.83
41	AA	Cancelled	973	1.36
56	AA	Diverted	215	0.3
3	AA	On-Time	55403	77.52
11	AA	Delayed	14880	20.82
47	AS	Cancelled	608	3.12
10	AS	On-Time	15502	79.49

```
In [12]: #Create a new dataframe with the percentage by origin airport and status
flight_origin_totals = flight_data_df.value_counts(subset=['ORIGIN']).reset_index() #get
flight_origin_totals_df = pd.DataFrame(flight_origin_totals) #create a dataframe
flight_origin_totals_df.columns = ['ORIGIN', 'TOTAL'] #Add column names
flight_origin_totals_df['PERCENTAGE'] = round(flight_origin_totals_df.TOTAL/flight_origi
```

```

origin_airport_delays = flight_data_df.value_counts(subset=['ORIGIN','STATUS']).reset_index
origin_airport_df = pd.DataFrame(origin_airport_delays) #create a dataframe
origin_airport_df.columns = ['ORIGIN','STATUS','COUNT'] #add column names
origin_airport_df = origin_airport_df.sort_values('ORIGIN') #sort by origin
origin_airport_df['PERCENTAGE'] = ''

for index, row in origin_airport_df.iterrows():
    tot = flight_origin_totals.loc[flight_origin_totals.ORIGIN==row.ORIGIN].TOTAL.values
    val = (row.COUNT/tot * 100)
    origin_airport_df.at[index,'PERCENTAGE'] = round(val[0].astype(float),2) #calculate t

origin_airport_df = origin_airport_df.sort_values('PERCENTAGE',ascending=False) #sort by
origin_airport_df.head(10)

```

Out[12]:

	ORIGIN	STATUS	COUNT	PERCENTAGE
<b>770</b>	GST	On-Time	12	100.0
<b>1208</b>	STC	On-Time	1	100.0
<b>385</b>	LWS	On-Time	95	96.94
<b>623</b>	BGM	On-Time	30	96.77
<b>470</b>	DRT	On-Time	60	96.77
<b>517</b>	PLN	On-Time	51	96.23
<b>488</b>	MCW	On-Time	55	94.83
<b>490</b>	FOD	On-Time	55	94.83
<b>515</b>	TBN	On-Time	51	94.44
<b>529</b>	LAR	On-Time	50	94.34

## vii. NULL check

In [13]: *#Looking for null values to further reduce the data size.*  
flight\_data\_df.isnull().sum()

Out[13]:

```

YEAR                0
QUARTER             0
MONTH              0
DAY_OF_MONTH       0
DAY_OF_WEEK        0
FL_DATE            0
MKT_UNIQUE_CARRIER 0
OP_UNIQUE_CARRIER 0
ORIGIN             0
ORIGIN_CITY_NAME   0
ORIGIN_STATE_ABR   0
ORIGIN_STATE_NM    0
DEST              0
DEST_CITY_NAME     0
DEST_STATE_ABR     0
DEST_STATE_NM      0
DEP_DELAY          10201
DEP_DELAY_NEW      10201
TAXI_OUT           10558
TAXI_IN            10769
ARR_TIME           10769
ARR_DELAY          12185
ARR_DELAY_NEW      12185

```

```

CANCELLED                                0
CANCELLATION_REASON                     0
DIVERTED                                0
DISTANCE                                0
CARRIER_DELAY                          477611
WEATHER_DELAY                           477611
NAS_DELAY                               477611
SECURITY_DELAY                          477611
LATE_AIRCRAFT_DELAY                     477611
STATUS                                  0
DELAYED                                 12185
DELAY_REASON                             0
dtype: int64

```

Based on the above, it doesn't appear there are any null rows that are irrelevant. Status is a significant column that tells if there are any flights with no relevant status. All flights are now categorized under On-Time, Delayed, Cancelled or Diverted.

The final flat file dataset is as follows:

```

In [14]: print(flight_data_df.columns)
         flight_data_df.head(5)

```

```

Index(['YEAR', 'QUARTER', 'MONTH', 'DAY_OF_MONTH', 'DAY_OF_WEEK', 'FL_DATE',
      'MKT_UNIQUE_CARRIER', 'OP_UNIQUE_CARRIER', 'ORIGIN', 'ORIGIN_CITY_NAME',
      'ORIGIN_STATE_ABR', 'ORIGIN_STATE_NM', 'DEST', 'DEST_CITY_NAME',
      'DEST_STATE_ABR', 'DEST_STATE_NM', 'DEP_DELAY', 'DEP_DELAY_NEW',
      'TAXI_OUT', 'TAXI_IN', 'ARR_TIME', 'ARR_DELAY', 'ARR_DELAY_NEW',
      'CANCELLED', 'CANCELLATION_REASON', 'DIVERTED', 'DISTANCE',
      'CARRIER_DELAY', 'WEATHER_DELAY', 'NAS_DELAY', 'SECURITY_DELAY',
      'LATE_AIRCRAFT_DELAY', 'STATUS', 'DELAYED', 'DELAY_REASON'],
      dtype='object')

```

```

Out[14]:
  YEAR  QUARTER  MONTH  DAY_OF_MONTH  DAY_OF_WEEK  FL_DATE  MKT_UNIQUE_CARRIER  OP_UNIQUE_CAI
0  2022         2      5              1            7  5/1/2022  12:00:00 AM             AA
1  2022         2      5              1            7  5/1/2022  12:00:00 AM             AA

```

5 rows × 35 columns

## Ethical implications:

BTS data - Flat File I do not see any ethical implications for this dataset as it is from a federal government source and is made accessible to public. The only concern I have is that, the

dataset I am referring to is old and it's possible the trend has changed over time. The reason for using old dataset is because I need the flight diversion information which I was only able to find for the year 2022.

## Conclusion:

As a part of this milestone, the following Data Transformation steps have been performed.

1. Dropped columns
2. Dropped duplicate rows
3. Replaced values in a dataframe column
4. Renamed a column
5. Added new columns to the dataframe
6. Implemented arithmetic functions for statistical analysis
7. Performed null check to drop rows with null values.

## Milestone 3 - Cleaning/Formatting Website Data

Flat File - Website: The flat file has a column for diverted flights but does not have any information on the cause for diversion. I would like to look up the reason for a flight being diverted. The website and flat file can be matched on flight date, origin and destination to lookup diverted flight information. Flat file has many to many relation with the Website. We will need to pass the flight date and the origin and destination city to the website to get flight diversion details for a particular date and route.

```
In [15]: url = 'https://www.diverted.eu/' #Website with diverted flight information
```

```
In [16]: # Parsing HTML using BeautifulSoup
html = urlopen(url)
soup = BeautifulSoup(html, 'html.parser')
```

```
In [17]: #Parse HTML for the diverted data table
flight_diverted_table = soup.findAll("table", { 'id' : 'tablepress-current_month' })
flight_diverted_table
```

```
Out[17]: [<table class="tablepress tablepress-id-current_month tablepress-responsive" id="tablepr
ess-current_month">
  <thead>
    <tr class="row-1 odd">

# Another way of reading html data without having to parse it #Read Diverted data from "https://www.diverted.eu/" into a dataframe url = 'https://www.diverted.eu/' df = pd.read\_html(url) data = df[0]

## Data Transformation

### String to Date conversion

```
In [19]: flight_diverted_df.Date.dtype
```

```
Out[19]: dtype('O')
```

Flight date is formatted as a string (Pandas type 'O' is a string).

```
In [20]: #Format Flight date from string to Date
flight_diverted_df.Date = pd.to_datetime(flight_diverted_df["Date"], format='%d.%m.%Y')
flight_diverted_df.head(5)
```

```
Out[20]:
```

	Date	Airlines/Operator	Flight number	Departure airport	Destination airport	Diverted to	Emergency code	Alleged reason	Aircraft	Regi
0	2022-07-20	Go First	G8151 / GOW151	Delhi	Guwahati	Jaipur	NaN	cracked windshield	Airbus A320-271N	
1	2022-07-20	Wizz Air	W65058 / WZZ101S	Bari	Krakow	Budapest	NaN	bomb threat	Airbus A321-271NX	
2	2022-07-19	Go First	G8386 / GOW386	Mumbai	Leh	Delhi	NaN	engine issue	Airbus A320-271N	
3	2022-07-19	Go First	G86202 / GOW6202	Srinagar	Delhi	Srinagar	NaN	engine issue	Airbus A320-271N	
4	2022-07-19	LOT	LO6297 / LOT6297	Prague	Zanzibar	Warsaw	NaN	brakes issue	Boeing 787-9 Dreamliner	

### Filter Flights by Date

Only select data for May'22, since our excel data is for May 2022

```
In [21]: diverted_df = flight_diverted_df[(flight_diverted_df.Date >= '2022-05-01') & (flight_div
```

```
diverted_df.head(5)
```

Out[21]:

	Date	Airlines/Operator	Flight number	Departure airport	Destination airport	Diverted to	Emergency code	Alleged reason	Aircraft	Registration
147	2022-05-31	Virgin Australia	VA9223 / VOZ9223	Perth	Boolgeeda	Perth	NaN	hydraulic issue	Airbus A320-232

## Repalce Headers

In [22]:

```
#Columns before renaming
diverted_df.columns
```

Out[22]:

```
Index(['Date', 'Airlines/Operator', 'Flight number', 'Departure airport',
      'Destination airport', 'Diverted to', 'Emergency code',
      'Alleged reason', 'Aircraft', 'Registration'],
      dtype='object')
```

In [23]:

```
#Renaming columns
diverted_df.columns = ['FL_DATE', 'OP_UNIQUE_CARRIER', 'FL_NUM', 'ORIGIN', 'DEST', 'DIVE
```

In [24]:

```
#Columns after renaming
diverted_df.columns
```

Out[24]:

```
Index(['FL_DATE', 'OP_UNIQUE_CARRIER', 'FL_NUM', 'ORIGIN', 'DEST',
      'DIVERTED_TO', 'EMERGENCY_CODE', 'DIVERTED_REASON', 'AIRCRAFT',
      'AIRCRAFT_REGISTRATION'],
      dtype='object')
```

## Drop rows

Drop null rows, if any

In [25]:

```
print('Data before dropping null rows : ',diverted_df.shape)
diverted_df.dropna()
print('Data after dropping null rows : ', diverted_df.shape)
```

```
Data before dropping null rows :  (87, 10)
Data after dropping null rows :  (87, 10)
```

No null rows to drop

Drop duplicates, if any

In [26]:

```
print('Dataframe before dropping duplicates :', diverted_df.shape)
```

```
flight_data_df = diverted_df.drop_duplicates()
print('Dataframe after dropping duplicates :',diverted_df.shape)
#No duplicates in the website data table
```

Dataframe before dropping duplicates : (87, 10)  
 Dataframe after dropping duplicates : (87, 10)

## Update rows

Look for rows with inconsistent reason for diversion

```
In [27]: diverted_df.groupby(['DIVERTED_REASON'])['DIVERTED_REASON'].count()
```

```
Out[27]: DIVERTED_REASON
air conditioning issue      1
bird strike                 8
bomb threat                 1

## Fill NA/NaN values

```
In [30]: print('EMERGENCY_CODE before updating NA/NAN : ',diverted_df.EMERGENCY_CODE.unique())
EMERGENCY_CODE before updating NA/NAN : [ nan 7700.]
```

```
In [31]: diverted_df = diverted_df.replace(np.nan,0)
```

```
In [32]: print('EMERGENCY_CODE after updating NA/NAN : ',diverted_df.EMERGENCY_CODE.unique())
EMERGENCY_CODE after updating NA/NAN : [ 0. 7700.]
```

## Ethical implications:

Website Data - The data source of the flat file is genuine and reliable (Bureau of Transportation). However, the website may not hold accurate information because it is not government or FAA authorized source. The website does not mention the source of data, making the accuracy and legality of data questionable. The website also states the same in the disclaimer. However, on running a high level search for a couple of diverted flight information, we are able to confirm the accuracy of the data.

## Conclusion:

As a part of this milestone, the following Data Transformation steps have been performed.

1. Data Type conversion
2. Renamed columns
3. Replaced values in a dataframe column
4. Filtered data
5. Filled NA/NAN values
6. Performed checks for duplicates and null rows

Following lines can be ignored. I will be reusing the same file for upcoming milestones

```
#Read Weather Data from API #https://visual-crossing-weather.p.rapidapi.com/history?startDateTime=
{}&aggregateHours=24&location={}&endDateTime={}&unitGroup=us
```

Bureau data is limited to carriers in USA. Get the unique operating carriers to identify US based carriers for flights diverted.
